ELECTRIC DOUBLE LAYER CAPACITORS SPECIFICATIONS

DRL SERIES

1. Application

The specification applies to electric double layer capacitors used in electronic equipment.

2. Part Number System

DRL 106 S 0T G 25 RR

2.1 Capacitance code

Code	106
Capacitance (F)	10

2.2 Rated voltage code

Code	0T
Voltage (W.V.)	2.7

2.3 Type

Code	RR
Type	Bulk

2.4 Capacitance tolerance

“S” stands for -20% ~ +50%

2.5 Diameter

Code	G
Diameter	10

2.6 Case length

25=25mm

Issued-date: 2020-07-29	Name	Specification Sheet – DRL		
Version	01	Page	3	
STANDARD MANUAL				

ELECTRIC DOUBLE LAYER CAPACITORS SPECIFICATIONS

DRL SERIES

3. Characteristics

Standard atmospheric conditions

Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests is as follows:

Ambient temperature: 15°C to 35°C

Relative humidity : 25% to 75%

Air Pressure : 86kPa to 106kPa

If there is any doubt about the results, measurement shall be made within the following conditions:

Ambient temperature: 20°C ± 2°C

Relative humidity : 60% to 70%

Air Pressure : 86kPa to 106kPa

Operating temperature range

The ambient temperature range at which the capacitor can be operated continuously at rated voltage is :-40°C to 70°C.

STANDARD MANUAL				

ELECTRIC DOUBLE LAYER CAPACITORS SPECIFICATIONS DRL SERIES

<Condition>

Figure 2- Voltage characteristic between capacitor terminals

$$C = \frac{I \times (t_2 - t_1)}{U_1 - U_2}$$

Where

- C is the capacitance(F);
- I is the discharge current (A);
- U_1 is the measurement starting voltage (V);
- U_2 is the measurement end voltage (V);
- t_1 is the time from discharge start to reach U_1 (s);
- t_2 is the time from discharge start to reach U_2 (s).

f) The discharge current I and the voltages U_1 and U_2 at the time of discharge voltage drop shall be as per Table 1 .The method classification shall be in accordance with the individual standards.

Table 1 – Discharge conditions

Charge time	30 min
I (mA)	$4 \times C U_R$
U_1	The value to be 80% of the charging voltage ($0.8 \times U_R$)
U_2	The value to be 40% of the charging voltage ($0.4 \times U_R$)
NOTE C_R is the rated capacitance in F(Farad),and U_R is the rated voltage in V (Volt)

5 . Notice item

- (1) The capacitor has fixed polarity.
- (2) The capacitor should be used under rated voltage.
- (3) The capacitor should not be used in the charge and discharge circuit with high frequency.
- (4) The ambient temperature affects the super capacitor life.
- (5) Voltage reduction $\Delta V=IR$ will happen at the moment of discharge.
- (6) The capacitor cannot be stored on the place with humidity over 85%RH or place with toxic gas.
- (7) The capacitor should stored in the environment within $-30^{\circ}\text{C}\sim 50^{\circ}\text{C}$ temperature and less than 60% relative humidity.
- (8) If the capacitor is applied on the double-side PCB, the connection should not be around the place on which the super capacitor can contact.
- (9) Don't twist capacitor or make it slanting after installing.
- (10) Need avoid over heat on the capacitor during soldering (The temperature should be 260°C with the time less than 5s during soldering on 1.6mm printed PCB.)
- (11) There is voltage balance problem between each capacitor unit during series connection between super capacitor.
